1. The following is an examiner's statement of reasons for allowance: the prior art of record discloses a system and method for determining oxygenation of the retina by measuring the fluorescence of flavoprotein in the retina but scans a small area of the retina or a limited number of pixels at a time. Therefore an extended procedure time is required to completely scan the retina leading to a significant time delay from the time at which fluorescence data from the first pixel is obtained until the time at which fluorescence data from the last pixel is obtained. And due to the time delay, eye movements and physiological changes reduces the accuracy of measurement of fluorescence information. Therefore the prior art of record does not teach in combination with the other elements of the claims, an image capture means for recording a single image representative of a retinal fluorescence signal generated immediately in response to the excitation light to minimize inaccuracies introduced by eye movements and rapid physiological changes.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
